European Technical Assessment

**ETA 23/0630
of 01/08/2023**

English translation prepared by IETcc. Original version in Spanish language

General Part

**Technical Assessment Body issuing
the ETA designated according to
Art. 29 of Regulation (EU) 305/2011**

Instituto de Ciencias de la Construcción Eduardo
Torroja (IETcc)

**Trade name of the construction
product**

Bremick Concrete Screw Anchors

**Product family to which the
construction product belongs**

Concrete Screw Anchors for use in cracked and
non-cracked concrete. Thread (drill bit) sizes 7.5
(6), 10.5 (8), 12.5 (10), 14.2 (12) and 16.5 (14)

Manufacturer

Bremick Pty LTD, 88 Dalmeny Avenue,
Rosebery NSW 2018 Australia
www.bremick.com.au
www.bremick.co.nz

Manufacturing plants

Bremick Pty Ltd Plant-2

**This European Technical
Assessment contains**

28 pages including 4 annexes which form an
integral part of this assessment.

**This European Technical
Assessment is issued in accordance
with regulation (EU) No 305/2011, on
the basis of**

European Technical Assessment EAD 330232-01-
0601 "Mechanical Fasteners for use in concrete",
ed. December 2019

This European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and should be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission according to article 25 (3) of Regulation (EU) No 305/2011.

SPECIFIC PART

1. Technical description of the product

The Bremick Concrete Screw Anchor is a type of anchor made of carbon steel and stainless steel (bimetal). The anchor is made of carbon steel for thread sizes (drill bit) 7.5(6), 10.5(8), 12.5(10), 14.2(12), 16.5(14) and of stainless steel for thread sizes (drill bit) 7.5(6), 10.5(8), 12.5(10). Both of them are screwed into a predrilled cylindrical drill hole. The special thread of the anchor cuts an internal thread into the member while setting. The anchorage is characterised by mechanical interlock in the special thread.

The product and its installation description are shown in annexes A.

2. Specification of the intended use in accordance with the applicable European Assessment Document.

The performances given in section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means to choosing the right products in relation to the expected economically reasonable working life of the works.

3. Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Static or quasi static actions	See annexes C1 to C7
Essential characteristic and displacements for seismic performance categories C1 and C2	See annexes C8 and C9

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Anchorage satisfy requirements for class A1
Resistance to fire	See annex D

4. Assessment and verification of constancy of performance (hereinafter AVCP) system applied, with reference to its legal base

The applicable European legal act for the system of Assessment and Verification of Constancy of Performances (see annex V of Regulation (EU) No 305/2011) is 96/582/EC.

The system to be applied is 1.

5. Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document.

The technical details necessary for the implementation of the AVCP system are laid down in the quality plan deposited at Instituto de Ciencias de la Construcción Eduardo Torroja.

Bremick Concrete Screw Anchor	
Product description	Annex A7
Installed condition	

Specification of intended use

Anchorage subjected to:

- Static or quasi static loads: all sizes and embedment depths.
- Fire exposure up to 120 minutes
- Performances C1 and C2 (seismic) for Carbon Steel screws as shown below:

Size	7.5 (6)		10.5 (8)		12.5 (10)			14.2 (12)		16.5 (14)	
h_{nom}	40	55	50	60	60	70	85	75	105	75	110
C1	✓	✓		✓			✓		✓		✓
C2				✓			✓		✓		✓

Base materials:

- Reinforced and unreinforced normal weight concrete without fibers according to EN 206:2013 + A1:2016.
- Strength classes C20/25 to C50/60 according to EN 206:2013 + A1:2016.
- Cracked and uncracked concrete.

Use conditions (environmental conditions):

- The anchor Carbon Steel shall be used in dry internal conditions.
- The anchor Bimetal shall be used in dry internal conditions, external atmospheric exposure (including industrial and marine environment) or permanent internal damp conditions if there are no particular aggressive conditions. Such particular aggressive conditions are e.g., permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g., in desulphurization plants or road tunnels where de-icing materials are used). Atmospheres under Corrosion Resistance Class CRC III according to EN 1993-1-4:2006+A1:2015 annex A.
- The anchor may be used for anchorages with requirements related to resistance to fire.

Design:

- Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete.
- Verifiable calculation rules and drawings are prepared taking into account of the loads to be attached. The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.)
- Anchorages under static or quasi-static loads are designed for design Method A in accordance with EN 1992-4:2018
- Anchorages under seismic actions are designed in accordance with EN 1992-4:2018. Anchorages shall be positioned outside of critical regions (e.g. plastic hinges) of the concrete structure. Fastening in stand-off installation or with grout layer are not allowed.
- Anchorages under fire exposure are designed in accordance with EN 1992-4:2018. It must be ensured that local spalling of the concrete cover does not occur.
- Shear assessment only covers the shear force induced by the fixed piece, i.e. the piece located between the anchor head and the concrete block (piece contained in t_{fix} , see Drawing A1).

Bremick Concrete Screw Anchor

Intended use

Specifications

Annex B1

Installation:

- Hammer drilling only.
- Anchor installation carried out by appropriately qualified personal and under the supervision of the person responsible for technical matters of the site.
- In case of aborted hole: new drilling at a minimum distance away of twice the depth of aborted hole or smaller distance if the aborted hole is filled with high strength mortar and if under shear or oblique tension load it is not the direction of the load application.
- After installation further turning of the anchor is not possible.
- The head of the anchor is supported on the fixture, as it is shown in Drawing A1, and it must not be damaged.

Installation process

	1. DRILL Drill a hole into the base material of correct diameter and depth by using a carbide drill bit in rotary plus hammer mode.
	2. BLOW and CLEAN Remove dust and debris from hole and loose particles left from drilling by using hand pump, compressed air or vacuum.
	3. INSTALL Hold screw anchor perpendicular direction into the base material through fixtures.
	4. APPLY TORQUE Select a power impact wrench or a torque wrench (e.g. Bosch GDS 18E, power input: 500 W; torque: 50-250 Nm). Power impact wrench does not exceed over torque Tinst.
	5. CHECK The head must be undamaged and in contact with the fixture. When screw head attach fixture or concrete surface firmly, further turning of the head is unnecessary.

Concrete pry-out failure	
k_8 factor values for concrete screw anchor made of Carbon Steel in Table C5 According EN 1992-4:2018, these values of k factor and the relevant values of $N_{Rk,c,fi}$ given in the above tables have to be considered in design.	

Concrete edge failure	
The characteristic resistance $V_{Rk,c,fi}^0$ in C20/25 to C50/60 concrete is determined by: $V_{Rk,c,fi}^0 = 0.25 \times V_{Rk,c}^0 (\leq R90)$ and $V_{Rk,c,fi}^0 = 0.20 \times V_{Rk,c}^0 (R120)$ With $V_{Rk,c}^0$ initial value of the characteristic resistance in cracked concrete C20/25 under normal temperature according to EN 1992-4:2018.

Performances Characteristic values for fire resistance		

Table D2: Characteristic values to fire resistance for Bimetal

Fire resistance duration = 30 minutes			7.5 (6)		10.5 (8)		12.5 (10)	
h_{nom}	Overall anchor embedment depth in the concrete:	[mm]	40	55	50	60	70	85
Tension loads, steel failure								
$N_{Rk,s,fi,30}$	Characteristic resistance	[kN]	0.21		0.84		1.70	
Pull-out failure								
$N_{Rk,p,fi,30}$	Character. resistance in concrete C20/25 to C50/60	[kN]	0.53	2.94	1.95	3.20	4.42	6.46
Concrete cone failure ¹⁾								
$N_{Rk,c,fi,30}$	Character. resistance in concrete C20/25 to C50/60	[kN]	0.78	1.97	1.43	2.34	3.36	5.86
Shear loads steel failure without lever arm								
$V_{Rk,s,fi,30}$	Characteristic resistance	[kN]	0.21		0.84		1.70	
Shear loads, steel failure with lever arm								
$M_{Rk,s,fi,30}$	Characteristic bending resistance	[Nm]	0.17		0.92		2.37	

Fire resistance duration = 60 minutes			7.5 (6)		10.5 (8)		12.5 (10)	
h_{nom}	Overall anchor embedment depth in the concrete:	[mm]	40	55	50	60	70	85
Tension loads, steel failure								
$N_{Rk,s,fi,60}$	Characteristic resistance	[kN]	0.19		0.67		1.36	
Pull-out failure								
$N_{Rk,p,fi,60}$	Character. resistance in concrete C20/25 to C50/60	[kN]	0.53	2.94	1.95	3.20	4.42	6.46
Concrete cone failure ¹⁾								
$N_{Rk,c,fi,60}$	Character. resistance in concrete C20/25 to C50/60	[kN]	0.78	1.97	1.43	2.34	3.36	5.86
Shear loads steel failure without lever arm								
$V_{Rk,s,fi,60}$	Characteristic resistance	[kN]	0.19		0.67		1.36	
Shear loads, steel failure with lever arm								
$M_{Rk,s,fi,60}$	Characteristic bending resistance	[Nm]	0.15		0.73		1.90	

Fire resistance duration = 90 minutes			7.5 (6)		10.5 (8)		12.5 (10)	
h_{nom}	Overall anchor embedment depth in the concrete:	[mm]	40	55	50	60	70	85
Tension loads, steel failure								
$N_{Rk,s,fi,90}$	Characteristic resistance	[kN]	0.15		0.50		1.09	
Pull-out failure								
$N_{Rk,p,fi,90}$	Character. resistance in concrete C20/25 to C50/60	[kN]	0.53	2.94	1.95	3.20	4.42	6.46
Concrete cone failure ¹⁾								
$N_{Rk,c,fi,90}$	Character. resistance in concrete C20/25 to C50/60	[kN]	0.78	1.97	1.43	2.34	3.36	5.86
Shear loads steel failure without lever arm								
$V_{Rk,s,fi,90}$	Characteristic resistance	[kN]	0.15		0.50		1.09	
Shear loads, steel failure with lever arm								
$M_{Rk,s,fi,90}$	Characteristic bending resistance	[Nm]	0.12		0.55		1.52	

¹⁾ As a rule, splitting failure can be neglected when cracked concrete and reinforcement is assumed.

²⁾ In absence of other national regulations, the partial safety factor for resistance under fire exposure $\gamma_{M,fi} = 1.0$ is recommended for steel failure and concrete related failure modes under shear loading. In case of concrete related failure modes under tension $\gamma_{M,fi} = \gamma_{inst.}$

Characteristic values for fire resistance

Annex D4

Table D2: Characteristic values to fire resistance for Bimetal (continuation)

Fire resistance duration = 120 minutes			7.5 (6)		10.5 (8)		12.5 (10)	
h_{nom}	Overall anchor embedment depth in the concrete:	[mm]	40	55	50	60	70	85
Tension loads, steel failure								
$N_{Rk,s,fi,120}$	Characteristic resistance	[kN]	0.11		0.42		0.95	
Pull-out failure								
$N_{Rk,p,fi,120}$	Character. resistance in concrete C20/25 to C50/60	[kN]	0.42	2.35	1.56	2.56	3.54	5.17
Concrete cone failure ¹⁾								
$N_{Rk,c,fi,120}$	Character. resistance in concrete C20/25 to C50/60	[kN]	0.62	1.57	1.15	1.87	2.69	4.69
Shear loads steel failure without lever arm								
$V_{Rk,s,fi,120}$	Characteristic resistance	[kN]	0.11		0.42		0.95	
Shear loads, steel failure with lever arm								
$M_{Rk,s,fi,120}$	Characteristic bending resistance	[Nm]	0.08		0.46		1.33	

¹⁾ As a rule, splitting failure can be neglected when cracked concrete and reinforcement is assumed.

²⁾ In absence of other national regulations, the partial safety factor for resistance under fire exposure $\gamma_{M,fi} = 1.0$ is recommended for steel failure and concrete related failure modes under shear loading. In case of concrete related failure modes under tension $\gamma_{M,fi} = \gamma_{inst.}$.

Spacing and edge distances			7.5 (6)		10.5 (8)		12.5 (10)	
h_{nom}	Overall anchor embedment depth in the concrete:	[mm]	40	55	50	60	70	85
h_{ef}	Effective anchorage depth:	[mm]	29	42	37	45	52	65
$s_{cr,N}$	Spacing	[mm]	116	168	148	180	208	260
s_{min}	Minimum spacing	[mm]	35	35	35	50	60	70
$c_{cr,N}$	Edge distance	[mm]	58	84	74	90	105	130
c_{min}	Minimum edge distance (one side fire)	[mm]	35	35	35	50	60	70
c_{min}	Minimum edge distance (two sides fire)	[mm]	300	300	300	300	300	300
γ_{Msp}	Partial safety factor ³⁾	[-]	1.0	1.0	1.0	1.0	1.0	1.0

³⁾ In absence of other national regulations

Concrete pry-out failure

k_s factor values for concrete screw anchor made of Bimetal Steel in Table C6
According EN 1992-4:2018, these values of k factor and the relevant values of $N_{Rk,c,fi}$ given in the above tables have to be considered in design.

Concrete edge failure

The characteristic resistance $V^0_{Rk,c,fi}$ in C20/25 to C50/60 concrete is determined by:
 $V^0_{Rk,c,fi} = 0.25 \times V^0_{Rk,c}$ ($\leq R90$) and $V^0_{Rk,c,fi} = 0.20 \times V^0_{Rk,c}$ (R120)
With $V^0_{Rk,c}$ initial value of the characteristic resistance in cracked concrete C20/25 under normal temperature according to EN 1992-4:2018.
